

4. In one or two sentences, please describe what you would see as the next steps with your model and/or results if you were in the analyst role and had another week to work on the question posed by the pitcher.

From here, I would try to improve the performance of the model with additional features or interaction terms because the final model, according to an area under the curve of about 0.57, was not a way better classifier than the null model. After deciding on an ultimate model, I would reevaluate the interpretations and see if I could learn anything more.
